

Audio out setup

Other controls are not shown.

It's a single output so it is sent to both left and right channels.

The large pink capacitor goes in anywhere on the power rail. Short leg in the blue line.

The pot will act as a volume control. It get's very loud so start with it in the middle.

The LED screen makes a lot of noise unfortunately. The brighter, the louder. That's what all the large caps are trying to mitigate.
